

ABSTRACT OF THE DISCLOSURE

A photosensitive or non-photosensitive colored composition for producing a black matrix, containing metal microparticles; a photosensitive transfer material formed from a layer made of the photosensitive colored composition; a black matrix produced by using the colored composition or the photosensitive transfer material; a color filter comprising the black matrix; a liquid crystal display comprising the color filter; and a black matrix substrate comprising a light-transmitting substrate, and a light-shielding layer in which silver microparticles having an average particle diameter of 60 to 250 nm are dispersed.
